GLEEVEC Tablet: Treats Certain Types of Leukemia and Other Cancers of the Blood Cell James Lee Anderson

“Although, your health condition may impact your everyday life, do not let it define who you are.”

GLEEVEC (imatinib) is used to treat certain types of leukemia (cancer that begins in the white blood cells) and other cancers of the blood cells. GLEEVEC is also used to treat gastrointestinal stromal tumors (GIST; a type of tumor that grows in the walls of the digestive passages and may spread to other parts of the body). GLEEVEC is also used to treat dermatofibrosarcoma protuberans (a tumor that forms under the top layer of skin) when the tumor cannot be removed surgically, has spread to other parts of the body, or has come back after surgery. Imatinib is in a class of medications called kinase inhibitors. It works by blocking the action of the abnormal protein that signals cancer cells to multiply. This helps stop the spread of cancer cells. This medicine is available only with your doctor's prescription. Thanks and may you have a good understanding about this drug—GLEEVEC. You may want to share this book with your family and friends who may be in need of help and would want to use this medicine. Take care, and as always, be well!
