## **The Making of the Modern World: 1945 to the Present: Science and Technology** John Perritano

This volume, Science and Technology, explores how the advances of World War II led to Cold War competition, and how government-sponsored research helped to send humans to the moon, to harness the atom for good and bad, and to pave the way for the Internet. It also examines how private industry in the West gained from those Big Science projects and opened up avenues in biotech and personal computing, among other fields. The last chapters also explore the ethical challenges raised by recent scientific developments, such as genetic engineering and drone technology. Each title in this series contains a series introduction, color photos throughout, and back matter including: an index, further reading lists for books and internet resources, and a timeline of events. Key Icons appear throughout the books in this series in an effort to encourage library readers to build knowledge, gain awareness, explore possibilities and expand their viewpoints through our content rich non-fiction books. Key Icons in this series are as follows: Words to Understand are shown at the front of each chapter with definitions. These words are set in boldfaced type in that chapter, so that readers are able to reference back to the definitions--building their vocabulary and enhancing their reading comprehension. Sidebars, highlighted graphically, contain content rich material that allows readers to build knowledge and broaden their perspectives by weaving together additional information to provide realistic and holistic perspectives. Text Dependent Questions are placed at the end of each chapter. They challenge the readers comprehension of the chapter they have just read, while sending the reader back to the text for more careful attention to the evidence
