Thoracic Impedance Measurements in Clinical Cardiology

Thoracic Impedance Measurements in Clinical Cardiology

Impedance measurement techniques are widely used in different areas of clinical cardiology. Despite the fact that the measurement principles are named impedance techniques and all are based on the principle of physical considerations, their technical performance varies. The impedance technique allows transthoracic, noninvasive haemodynamic monitoring, invasive intracardiac volumetry, intracardiac rate-adaptive pacing (using pre-ejection interval PE I or minute ventilation), evaluation of the viability of tissues or organs before transplantation, detection of post-transplantation organ rejection, estimation of vessel stenosis and the monitoring of arrhythmogenic foci during electrical ablation.
