Philip's Exploring Stars and Planets Ian Ridpath

Philip's Exploring Stars and Planets is a completely updated and redesigned edition of the popular children's book formerly titled 'Philip's Atlas of Stars and Planets'. Written specially for 8 to 14 year olds, Philip's Exploring Stars and Planets is a colourful and entertaining introduction to the exciting world of astronomy. The book is illustrated with more than 200 colour photographs, artworks and maps, as the author describes the latest developments in the fast-moving fields of space exploration and astronomy. Concise chapters introduce the Sun, the Earth and all the other planets in our Solar System. Then, moving further into space, the author introduces the stars and galaxies, and explores the origin of the Universe. Philip's Exploring Stars and Planets includes a set of star charts showing all the stars visible to the naked eye. A budding astronomer will be able to use these charts to learn the constellations from any point on Earth. A large photograph of the Moon, with its major features clearly labelled, will encourage anyone with binoculars or a telescope to start Moon-watching. Packed with fascinating facts and figures about the wonders of the Universe, Philip's Exploring Stars and Planets concludes with a series of quiz questions, so that the reader can test how much he or she has learned.
