## **Bulbs of North America** North American Rock Garden Society

North America is home to approximately four dozen bulbous genera. Among these are some very popular rock garden plants, such as *Calochortus*, *Erythronium*, and *Fritillaria*, which have never had anything substantial written about them in book form. Others, including *Calydorea*, *Hypoxis*, and *Muilla*, are not as well known outside specialist collections. The characteristics that make bulbs so desirable in gardens include their great diversity of flowering time, color, size, and form; their ability to adapt to a wide range of environments; and their capacity to multiply and spread without a gardener's intervention. Amateur botanists and horticulturists, particularly those with an interest in alpine and rock gardens, and travelers planning a field trip to choice plant-viewing sites all over the continent, will be inspired by this firsthand account of native North American bulbs. More than 100 impressive color photos illustrate the 11 original chapters.
