Fundamentals of Semiconductors: Physics and Materials Properties (Graduate Texts in Physics)

Peter Y Yu, Manuel Cardona

Fundamentals of Semiconductors: Physics and Materials Properties (Graduate Texts in Physics) Peter Y Yu, Manuel Cardona

Since the appearance of our book, *Fundamentals of Semiconductors: Physics and Materials Properties*, one of the questions we are asked most frequently is this: is there a solution manual to this book? In preparing the questions at the end of each chapter we have already tried to guide the readers to derive the answers by themselves using a step-by-step approach. Clearly this strategy did not work for everyone. We recognize that many of the questions in this book are quite challenging and often require reading of research papers to solve them. In response to readers demand we have decided to provide solutions to some of the problems in this new edition. Since working through problems is an important and necessary part of the learning process in physics we will not give the solutions to all the problems. Instead, we hope to use the solutions to a number of selected problems in each chapter as an additional study help to the readers. We like to use these solutions to provide more in depth discussions to topics which may be too specialized for a typical course on semiconductor physics. By leaving enough unsolved problems and adding a few new ones there are still plenty of opportunities for both the instructors to choose problems for assignments and for students to test their understanding of the text."

From reader reviews:

Tommie Payton:

Why don't make it to become your habit? Right now, try to prepare your time to do the important work, like looking for your favorite book and reading a guide. Beside you can solve your problem; you can add your knowledge by the book entitled Fundamentals of Semiconductors: Physics and Materials Properties (Graduate Texts in Physics). Try to make the book Fundamentals of Semiconductors: Physics and Materials Properties (Graduate Texts in Physics) as your close friend. It means that it can to be your friend when you experience alone and beside that course make you smarter than ever before. Yeah, it is very fortunate for yourself. The book makes you far more confidence because you can know every thing by the book. So , we should make new experience in addition to knowledge with this book.

Deborah Ryan:

Do you one among people who can't read pleasurable if the sentence chained from the straightway, hold on guys this kind of aren't like that. This Fundamentals of Semiconductors: Physics and Materials Properties (Graduate Texts in Physics) book is readable simply by you who hate the perfect word style. You will find the data here are arrange for enjoyable looking at experience without leaving perhaps decrease the knowledge that want to supply to you. The writer regarding Fundamentals of Semiconductors: Physics and Materials Properties (Graduate Texts in Physics) content conveys thinking easily to understand by many people. The printed and e-book are not different in the written content but it just different by means of it. So , do you even now thinking Fundamentals of Semiconductors: Physics and Materials Properties (Graduate Texts in Physics) is not loveable to be your top checklist reading book?

Catherine Riddle:

The actual book Fundamentals of Semiconductors: Physics and Materials Properties (Graduate Texts in Physics) will bring one to the new experience of reading some sort of book. The author style to describe the idea is very unique. When you try to find new book to read, this book very ideal to you. The book Fundamentals of Semiconductors: Physics and Materials Properties (Graduate Texts in Physics) is much recommended to you you just read. You can also get the e-book from official web site, so you can quicker to read the book.

Wanda Collins:

That publication can make you to feel relax. This particular book Fundamentals of Semiconductors: Physics and Materials Properties (Graduate Texts in Physics) was colorful and of course has pictures around. As we know that book Fundamentals of Semiconductors: Physics and Materials Properties (Graduate Texts in Physics) has many kinds or genre. Start from kids until teens. For example Naruto or Private investigator Conan you can read and feel that you are the character on there. Therefore , not at all of book are usually make you bored, any it makes you feel happy, fun and rest. Try to choose the best book for you and try to

like reading this.
