Cognitive Informatics in Health and Biomedicine: Case Studies on Critical Care, Complexity and Errors (Health Informatics)

Cognitive Informatics in Health and Biomedicine: Case Studies on Critical Care, Complexity and Errors (Health Informatics)

Enormous advances in information technology have permeated essentially all facets of life in the past two decades. Formidable challenges remain in fostering tools that enhance productivity but are sensitive to work practices. Cognitive Informatics (CI) is the multidisciplinary study of cognition, information and computational sciences that investigates all facets of human computing including design and computer-mediated intelligent action, thus is strongly grounded in methods and theories from cognitive science. As an applied discipline, it has a close affiliation with human factors and human-computer interaction, and provides a framework for the analysis and modeling of complex human performance in technology-mediated settings and contributes to the design and development of better information systems. In recent years, CI has emerged as a distinct area with special relevance to biomedicine and health care. In addition, it has become a foundation for education and training of health informaticians, the Office of the National Coordinator for Health Information Technology initiating a program including CI as one of its critical elements to support health IT curriculum development.

This book represents a first textbook on cognitive informatics and will focus on key examples drawn from the application of methods and theories from CI to challenges pertaining to the practice of critical-care medicine (CCM). Technology is transforming critical care workflows and re-organizing patient care management processes. CCM has proven to be a fertile test bed for theories and methods of cognitive informatics. CI, in turn, has contributed much to our understanding of the factors that result in complexity and patient errors. The topic is strongly interdisciplinary and will be important for individuals from a range of academic and professional backgrounds, including critical care specialists, psychologists, computer scientists, medical informaticians, and anthropologists.??

From reader reviews:

Christopher Mills:

Do you have favorite book? When you have, what is your favorite's book? Book is very important thing for us to understand everything in the world. Each guide has different aim as well as goal; it means that reserve has different type. Some people experience enjoy to spend their time to read a book. They can be reading whatever they acquire because their hobby will be reading a book. Why not the person who don't like studying a book? Sometime, particular person feel need book when they found difficult problem or exercise. Well, probably you should have this Cognitive Informatics in Health and Biomedicine: Case Studies on Critical Care, Complexity and Errors (Health Informatics).

Charles Barton:

People live in this new morning of lifestyle always attempt to and must have the free time or they will get wide range of stress from both daily life and work. So , if we ask do people have spare time, we will say absolutely sure. People is human not only a robot. Then we question again, what kind of activity do you possess when the spare time coming to you of course your answer will probably unlimited right. Then do you try this one, reading publications. It can be your alternative within spending your spare time, the book you have read is Cognitive Informatics in Health and Biomedicine: Case Studies on Critical Care, Complexity and Errors (Health Informatics).

Megan Kelly:

Reading can called mind hangout, why? Because if you are reading a book mainly book entitled Cognitive Informatics in Health and Biomedicine: Case Studies on Critical Care, Complexity and Errors (Health Informatics) your brain will drift away trough every dimension, wandering in each and every aspect that maybe mysterious for but surely can become your mind friends. Imaging every word written in a book then become one contact form conclusion and explanation in which maybe you never get just before. The Cognitive Informatics in Health and Biomedicine: Case Studies on Critical Care, Complexity and Errors (Health Informatics) giving you another experience more than blown away the mind but also giving you useful information for your better life on this era. So now let us show you the relaxing pattern at this point is your body and mind are going to be pleased when you are finished looking at it, like winning a casino game. Do you want to try this extraordinary spending spare time activity?

Tanya McGaha:

Your reading sixth sense will not betray anyone, why because this Cognitive Informatics in Health and Biomedicine: Case Studies on Critical Care, Complexity and Errors (Health Informatics) publication written by well-known writer who knows well how to make book which might be understand by anyone who also read the book. Written in good manner for you, dripping every ideas and composing skill only for eliminate your current hunger then you still doubt Cognitive Informatics in Health and Biomedicine: Case Studies on

Critical Care, Complexity and Errors (Health Informatics) as good book not only by the cover but also through the content. This is one book that can break don't evaluate book by its cover, so do you still needing yet another sixth sense to pick that!? Oh come on your looking at sixth sense already told you so why you have to listening to an additional sixth sense.
